ECOSM Live Subtitling system:

CREASYSUBS LIVE, a customized and extendable subtitling system based on voice recognition, takes away the constraints of classic process. It consists in a direct recognition of a live audio input to be quickly and efficiently transcribed in text with punctuation saved as files to be sent directly "on-air".

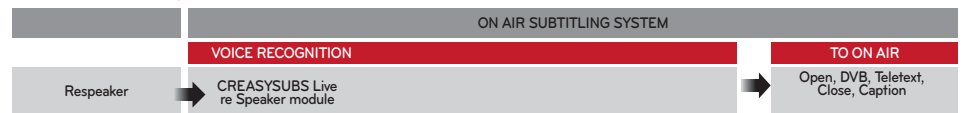

One of CREASYSUBS Live unique specificities is to be compatible with diverse voice recognition engine enabling end-user to benefits from the best engine available in its native language.

It is not dependent on a proprietary engine but offers customization and flexibility in order to enrich the voice recognition according to needs of each country and its local language.

The solution is already used by TV channels, production centers and organizations worldwide.
